I worked together with Kishore to move his AD design to our simulator using my BSIM3 model. And we've tried to run through the whole flow of the BMAC simulator in last week. Finally, we found the simulator was kept running without any results coming out. Bos' said that this was caused by the convergence problem of the dot card in their program.

Next week's plan:

Because I will have two projects due before Wednesday and two exams on Tuesday and Thursday, I have no much time before Thursday. Chris and Gus told me they have no time before Thursday because of the exams. And in the last Friday meeting, I already asked them to work with me on EKV model after Thursday to get some result of EKV model. They agreed to work with me to put more time on it after Thursday.

And if the bugs of Bos' program fixed, I also will continuously work with Kishore to run through the AD design.
